

## Aria Ducting Notes.

---

Adaptors and connector pieces go over the flaps, the straight lengths go underneath

Secure with adhesive/tape/silicone to seal.

Using a rectangular to round straight adaptor directly on the outlet increases the height needed for install from 207mm to 255mm.

To maintain lowest installation height, use 1 length of ducting then the adaptor

Premium channelled ducting with curved corners can be used (Neff/Bosch/Compair) but cannot be combined with the standard ducting.
